Step 1 — Separating Digitizer and Case

- Insert the plastic opening tool between the digitizer and the case.
- Place the spudger in the gap created by the plastic opening tool to assist in separation.

Step 2

- Slide the spudger along the perimeter of the device to fully separate the two pieces.

Step 3 — Battery

- Insert the plastic opening tool between the battery and case.
- Apply leverage to break the glue that is attaching the battery to the case.

Step 4

- Continue breaking the glue along the perimeter of the battery until the battery can be removed.
- ⓘ Breaking all the glue between the battery and case may take a long time.

Step 5

- Using the soldering iron, heat up the solder that is attaching the battery to the motherboard.
- ⚠ The heat from the soldering iron may cause personal injury or damage the internal components of the tablet.

Step 6

- Suck up the leftover solder using the desoldering pump.
- Remove the battery from the motherboard.

To reassemble your device, follow these instructions in reverse order.
